Some things to note from this email chain.... 1) it looks like they are trying to put together a sampling plan. 2.) It appears

## Ex. 5 Deliberative Process (DP)

I received this email this morning. We tried to call the general manager and had to leave a voicemail. I will also forward the email I sent to him last night asking for updates. We will pass any more information along as we receive it. Thanks again for all of your input and feedback.

Thanks Bobby for the POU filter pics.

To answer your phone question today: **Should CWB focus on LSL sites or other newer sites less likely to have LSLs?**

Please prioritize your efforts on identifying/verifying the highest risk customers first...basically LSLs.

Eventually the goal is to have a complete materials inventory of all your customers service line material. By all means include day cares and older schools.

The DHHR press release includes: "Lead lines were phased out in the 1950s and it would be unlikely but possible that houses built after 1960 could have lead lines." Homes that are newer or do not have lead service lines will not be impacted by this study." See: <https://dhhr.wv.gov/News/Pages/DHHR-and-Clarksburg-Water-System-to-Study-Older-Homes-with-Lead-Service-Lines.aspx>

As communicated, CWB is dropping off several sample bottles today.

Provide approx. # at end of day.
